Hopkins-Based Journal Changes Editors

Johns Hopkins University researcher S. Darius Tandon, Ph.D., has taken over as Editor-in-Chief of the journal Progress in Community Health Partnerships: Research, Education and Action.

Tandon succeeds Eric B. Bass, M.D., MPH, who now serves as Editor Emeritus. Bass, based at the Johns Hopkins School of Medicine like Tandon, held the Editor-in-Chief position since PCHP’s debut in 2007.

PCHP, the first peer-reviewed journal solely dedicated to community-based participatory research (CBPR), is published by the Johns Hopkins University Press.

“I am absolutely delighted that Darius will be leading PCHP though the next phase of its development,” Bass said. “I am also very proud of what we have accomplished as a team. The entire team deserves credit for launching a new journal that is already recognized as the leader in publishing community-based participatory research.”

Tandon focuses his research on community-based mental health interventions and also directs the community engagement core of the Johns Hopkins Institute for Clinical and Translational Research. Tandon has served as Deputy Editor of PCHP since 2007.

“I’m excited to step into this position as the journal’s contributions to the field of CBPR are increasingly recognized,” Tandon said. “I hope to continue to facilitate the journal’s mission of promoting research that highlights the importance of community health partnerships for improving health outcomes nationally and internationally.”

PCHP publishes four issues a year filled with research on topics of importance to researchers and community practitioners related to improving health outcomes and eliminating health disparities.

About The Johns Hopkins University Press
Founded in 1878, The Johns Hopkins University Press is recognized as one of the world’s finest and most accomplished scholarly publishers. Today, in addition to a broad catalog of titles, The Press publishes more than 70 scholarly periodicals and more than 200 new books each year in the arts and humanities, technology and medicine, higher education, history, political science, and library science.
